PROFESSIONAL SUMMARY

Backend-focused Software Engineering student at MUET with 4 production-grade Java projects demonstrating deep expertise in Spring Boot, REST API design, Spring Security, Spring Data JPA, and MySQL/JDBC. Proven ability to architect layered systems with strict separation of concerns, enforce SQL injection prevention via PreparedStatement, and deliver full CRUD lifecycles with proper HTTP semantics. Actively seeking a Software Engineering role to contribute backend development skills to a product team.

TECHNICAL SKILLS

Languages: Java (Advanced) · C++ (Intermediate) · SQL (Advanced) · HTML5 · CSS3 · JavaScript

Frameworks: Spring Boot · Spring MVC · Spring Data JPA · Spring Security · Spring Actuator · Servlets · JSP

Databases: MySQL · JDBC (PreparedStatement, Transaction Mgmt) · H2 Embedded Database

Tools: Git/GitHub · Maven · Postman · Docker · Swagger · Apache Tomcat · IntelliJ IDEA · Eclipse IDE · VS Code

Concepts: OOP · MVC Architecture · DAO/DTO Patterns · REST API Design · JUnit · Agile · Software Testing · API Testing

EDUCATION

B.E. in Software Engineering

Aug 2023 – Aug 2027
(Expected)

Mehran University of Engineering & Technology (MUET), Jamshoro, Sindh

Coursework: OOP, Data Structures, Database Systems, Software Engineering, Web Technologies, Discrete Mathematics

Intermediate in Pre-Engineering

2019 – 2021

AIMS School and College, Matli, Sindh

PROJECTS

Social Media Backend API | Java · Spring Boot · Spring Data JPA ·

github.com/Tahir-Dars/SocialMedia

ModelMapper · Lombok · Spring Validation

Jan 2026 – Feb 2026

- Architected scalable Spring Boot backend with DTO/Entity separation via ModelMapper, decoupling API contracts from internal domain models — a key production best practice for API stability and versioning.
- Enforced controller-layer input validation using Spring Validation annotations, intercepting 100% of malformed payloads before reaching service or persistence layers.
- Implemented Spring Actuator observability hooks for real-time health metrics and diagnostic endpoints; applied SOLID principles throughout (SRP, DI, IoC).

Banking Customer REST API | Java · Spring Boot · Spring Data JPA ·

github.com/Tahir-Dars/BankCustomerAPI

Spring Security · H2 · Maven

Jan 2026

- Architected RESTful API for full banking customer lifecycle (CRUD) using a 4-tier Spring Boot structure: Controller → Service → Repository → Model with clean layer boundaries.
- Integrated Spring Security authentication and Spring Actuator health monitoring, establishing endpoint protection and production observability from project inception.
- Delivered complete API with proper HTTP semantics (200, 201, 400, 404, 500) and consistent JSON response contracts across all endpoints.

Full-Stack To-Do List Web Application | Java · Servlets · JSP ·

github.com/Tahir-Dars/todolistUsingServlet

JDBC · MySQL · Maven · Tomcat · Bootstrap 5

Nov 2025 – Dec 2025

- Shipped end-to-end task management app: designed MySQL schema, built 3 HTTP Servlet endpoints (CRUD), deployed WAR to Apache Tomcat, and integrated Bootstrap 5 responsive UI.
- Designed 4-layer architecture (Controller → DAO → DB Connector → Entity Model) achieving clean separation of HTTP handling from data access logic with zero inter-layer coupling.

Banking System Application – JDBC Transaction Management

github.com/Tahir-Dars/BankingSystem_JDBC

| Java · JDBC · MySQL · PreparedStatement

Mar 2025 – Apr 2025

- Engineered production-grade console banking app with account creation, deposit/withdrawal, and fund transfer — implementing explicit JDBC transaction control with manual commit/rollback on all balance mutations.
- Achieved ZERO data corruption across 50+ test scenarios by enforcing atomic transaction boundaries; validated that partial-transfer failures roll back correctly under all tested conditions.
- Built secure authentication using PreparedStatement across all database operations, eliminating SQL injection vectors entirely in all 3 transaction types.

KEY ACHIEVEMENTS

- **Rapid Technical Progression:** Advanced from raw JDBC/console apps to Spring Boot REST APIs with Security and Actuator integration within 12 months of self-directed learning.
- **Production-Quality Portfolio:** Delivered 4 complete, publicly documented GitHub projects meeting professional architecture standards — layered design, security, and test coverage in every project.
- **Data Integrity:** Achieved ZERO data corruption across 50+ banking system test scenarios via explicit JDBC transaction boundaries and atomic operation validation.
- **Security-First Development:** Applied SQL injection prevention (PreparedStatement) across 100% of database operations in all projects, with demonstrated understanding of OWASP injection vulnerabilities.
